

The First Plant-Based Propylene Glycol

In the inevitable shift away from fossil fuels, ADM is producing the market's first plant-based Propylene Glycol. Finally, there is an alternative to petroleum-based chemicals. "One of the things that has really differentiated us, is our ability to scale, to know how to take something all the way from ideation to commercial realization," says ADM.

As more and more of us strive to choose products that are in line with our personal values, those made from plants, rather than fossil fuel derivatives, offer consumers a choice that is kinder to the environment. These products meet the standards of USDA's Certified Biobased Product Label.

ADM PG is available in both USP/FCC and Industrial grades. It is used in functional fluids, fragrance and flavor, personal care, HI & I (Household, Industrial & Institutional) and various other human and animal food applications.

TLC Ingredients Inc. is a preferred distributor of ADM, which means we have this in stock and ready to answer your question on how this will work in your formula.

Learn more about our partners who are offering plant-based products at our website, on our bio-based page: <https://www.tlcingredients.com/industrial-products-and-markets/bio-based-natural-ingredients/>

TLC Ingredient's Third-Party Audited Food Safety program ensures the highest levels of Food Safety and Security.
