Industrial Formulation Trends:

Environmental & Consumer Safety

There is a growing interest in products that are environmentally-friendly and safer to use. TLC Ingredients has partnered with Industry Leaders to identify next generation products.

◆ Akzo Nobel's Dissolvine GL chelating agent is approved by the EPA as a Safer Choice ingredient, due to its bio-degradability and low human toxicity.

◆ Sodium Bisulfate is a better choice than Citric, Sulfamic or Phosphoric Acids, as it is biodegradable, non-toxic and only a mild irritant. SBS is listed on EPA's Safer Choice Ingredients List (SCIL).

◆ Let us help you identify low-VOC and ozone-friendly alternatives to traditional industrial chemicals.

◆ ADM's Bio-based Propylene Glycol production process results in a 61% reduction in greenhouse gas emissions (GHG), compared to petroleum-based Propylene Glycol.

Please consider TLC Ingredients as your resource when trying to re-formulate existing products and when developing new formulations.
